In this course, we will, of course, write a lot of SQL commands. When following along, you might occasionally run into **unexpected errors** or fail to reproduce the results we show in the course videos.

For those cases, we **provide lots of SQL command snapshots** for you to **download or compare them**.

You find all course resources (***SQL command snapshots and slides***) in this GitHub repository: https://github.com/academind/sql-complete-guide-code

You find detailed instructions on how to navigate and use this repository directly on the repository page.
